Professional Summary

Full Stack & GenAI Engineer with 1+ year of hands-on experience building production-grade AI pipelines, agentic RAG systems, and real-time web applications using Python, React.js, and FastAPI. Proven ability to architect end-to-end solutions spanning LLM integration (Llama 4, Groq SDK), vector databases (Supabase pgvector), drag-and-drop visualization engines, and automated document-processing workflows. Delivered projects across defence (DRDO) and enterprise environments; passionate about fusing generative AI with scalable full-stack development to create impactful, user-centric products.

Technical Skills

Languages: Python, JavaScript (ES6+), Java, SQL, C, C++

AI / GenAI: Llama 4, Groq SDK, Pydantic AI, Crawl4AI, Nanonets OCR, RAG Pipelines, AI Summarization Workflows

Frontend: React 19, React.js, Vega-Lite, HTML5, CSS3, Tkinter

Backend: FastAPI, RESTful APIs, Hibernate Framework, JDBC

Databases / Vector Stores: Supabase pgvector, PostgreSQL, SQL

Data Processing: Arquero, PyMuPDF, openpyxl, Web Scraping

Tools & DevOps: Docker, Git, Microsoft Teams API, Visual Studio Code

Concepts: Agentic AI, Semantic Search, Hierarchical Data Modelling, Cloud Integrations, Bot Integration

Work Experience

Defence Research & Development Organisation (DRDO) Hyderabad, India *Project Intern – Full Stack Developer Nov 2023 – May 2024 (213 Days)* – Led end-to-end development of a Live Missile Data Simulation system, owning both front-end and back-end modules.

- Built real-time missile trajectory dashboards using React.js, implementing live data rendering with dynamic, responsive UI components.
- Developed Python-based backend services to ingest and process real-time simulation data streams, ensuring high-availability server-client communication.
- Managed the full server-client architecture across a 213-day engagement, guaranteeing reliable data exchange and system uptime throughout the project lifecycle.

Cognitbotz Hyderabad, India *Software Development Intern 170 Days* – Designed and delivered Meet-Ops, a meeting automation bot that autonomously joins Microsoft Teams meetings and captures transcripts for downstream AI processing.

- Integrated the bot with a React.js web dashboard to surface live meeting transcripts and AI-generated insights via backend REST APIs.
- Implemented an end-to-end AI summarization pipeline to transform raw transcripts into actionable meeting insights.
- Deployed cloud-integrated services using Docker, PostgreSQL, and Microsoft Teams API for persistent, scalable meeting data storage.

Projects

OpenViz – Generative AI Analytics Platform | *React 19, Vega-Lite, Llama 4, Groq SDK, Arquero* – Architected a React 19 & Vega-Lite visualization engine featuring a hybrid drag-and-drop/AI interface powered by Llama 4 via Groq SDK, enabling natural-language chart generation.

- Implemented a client-side RAG pipeline with Arquero for instant data profiling and context-aware chart suggestions, guaranteeing data privacy and zero-latency interactions.

AI-Powered Agent Builder (Agentic RAG) | *Pydantic AI, Crawl4AI, Supabase pgvector, Python* – Architected a conversational AI system that generates production-ready Pydantic AI agents, achieving an 85% success rate for synthesised agent code.

- Built an automated ingestion pipeline using Crawl4AI to scrape and index documentation into Supabase

pgvector, enabling high-fidelity semantic search for context retrieval.

SAP Invoice Consolidation | *Python, Tkinter, Nanonets OCR, PyMuPDF, Groq API, openpyxl* – Engineered an AI document-processing pipeline combining Nanonets OCR for high-accuracy PDF extraction and Groq API for intelligent field parsing, producing SAP-ready Excel output.

- Developed a Tkinter desktop application with logic for multi-page PDF handling, vendor validation, and dynamic derivation of tax codes to ensure full SAP compliance.

Meet-Ops – Meeting Automation System | *Microsoft Teams API, React.js, Docker, PostgreSQL* 170 Days – Built an autonomous meeting assistant bot that joins Teams calls, captures transcripts, and surfaces AI-driven insights through a connected web dashboard.

- Integrated backend REST APIs with cloud services for reliable communication between the Teams platform, bot, and web application; implemented AI summarization workflows for actionable insights.

Live Missile Trajectory Visualisation & Report Generation | *React.js, Python, FastAPI* 213 Days – Developed a real-time missile trajectory visualization system for DRDO, processing live simulation data and rendering it dynamically on a React.js front end via FastAPI services.

- Built Python backend pipelines for automated data ingestion, processing, and mission analysis report generation.

NOC Dashboard | *React.js, Python, Hierarchical Data Structures, Excel Integration* 78 Days – Designed an operational Network Operations Center dashboard to visualise large-scale datasets sourced from multi-category Excel sheets.

- Structured raw data into a 4-level hierarchical model (Main Category → Sub Category → Time-based grouping → Metrics), enabling faster graph rendering and efficient filtering.

Text-to-Speech Converter | *Python, gTTS, OS Library* 30 Days – Built an accessibility-focused TTS application to help visually impaired users comprehend documents via audio, integrating gTTS with a media player for seamless playback.

Breakout Ball Game | *Java, AWT* 3 Months – Designed and developed a classic brick-breaking game in Java using AWT (Color, BasicStroke, Graphics) for rendering and user-input handling.

Education

Vignan Institute of Technology and Science Hyderabad, India *Bachelor of Technology – Computer Science and Engineering (CSE) Graduated 2024* – CGPA: 7.5 / 10

Telangana State Board Telangana, India *12th Grade (Intermediate) 2020* – Score: 84.5%

Telangana State Board Telangana, India *10th Grade (SSC) 2018* – Score: 88.0%

Certifications

CLA – Programming Essentials in C (Cisco / C Institute)

CPA – Programming Essentials in C++ (Cisco / C Institute)

PCAP – Programming Essentials in Python (Cisco / Python Institute)

PSAP – Programming Essentials in Python – Advanced (Python Institute)
